

CPSC 320: Intermediate Algorithm Design and Analysis
General information regarding homework assignments

- The homework has to be done and written by **each student individually**, see also the university policies for scholarly integrity and academic misconduct which can be accessed via links from the course web-page.
- Read each question carefully before you start thinking about a solution.
- Write your name and student number on the top of each page of your homework
- Staple all pages together so nothing gets lost.
- Make sure we can read your hand-writing.
- Use the **same notation as in the lectures**. If you choose to use a different notation, you first need to provide detailed definitions for all new terms that you use, otherwise we do not know what you mean.
- Drop your homework in box 18 in the basement of the main computer science building (i.e. the building with the CS reception) by the deadline indicated on the respective homework assignment.
- If you have general questions concerning a homework assignment that is due in the future, please post your question to the news group which you can access via the course web-page. When doing this, you must not reveal or suggest full or partials solutions to the homework assignment.
- If you have questions concerning the marking of your homework, please contact the instructor or lead-TA within two weeks of receiving your marked homework.
